Your Code

```python
s = input().lower().replace(" ", "")
for char in sorted(set(s)):
    print(f"{char}-> {s.count(char)}")
```

Submitted

Input

```
Hello Word
```

Output

```
d-> 1
e-> 1
h-> 1
l-> 2
o-> 2
r-> 1
```

Your Code

```python
import collections

def solve():
    try:
        sentence = input().strip()
    except EOFError:
        return

    vowels_list = 'aeiou'
    vowels_found = []
    consonants_found = []

    for char in sentence.lower():
        if char.isalpha():
            if char in vowels_list:
                vowels_found.append(char)
            else:
                consonants_found.append(char)

    v_count = len(vowels_found)
    c_count = len(consonants_found)
```

Input

```
python programming
```

Output

```
Vowels: 4 | Consonants: 13 Most frequent vowel: o (2) Least frequent consonant: y (1) Vowel-to-Consonant Ratio: 0.31
```

Your Code

```python
def compress_rle(s):
    if not s:
        return "", ""

    compressed = []
    i = 0
    while i < len(s):
        count = 1
        while i + 1 < len(s) and s[i] == s[i+1]:
            i += 1
            count += 1

        compressed.append(s[i])
        if count > 1:
            compressed.append(str(count))
        i += 1

    res = "".join(compressed)

    if len(res) >= len(s):
        return "Compression not beneficial.", s
    return res, s
```

Input

```
aabbbccdddee
```

Output

```
Compressed: a2b3c2d3e2
Decompressed: aabbbccdddee
```

Your Code

```python
import re
from collections import Counter

def count_syllables(word):
    # Approximation: number of vowel groups per word
    vowels = "aeiouy"
    word = word.lower()
    count = 0
    if not word:
        return 0

    # Check first character
    if word[0] in vowels:
        count += 1

    # Count transitions from non-vowel to vowel
    for i in range(1, len(word)):
        if word[i] in vowels and word[i-1] not in vowels:
            count += 1
    return count
```

Input

```
python is a powerful programming language
```

Output

```
Words: 6 | Sentences: 1 |
Paragraphs: 1
Avg Word Length: 6.0 | Avg
Sentence Length: 6.0
Top 5 Words: python(1),
powerful(1), programming(1),
```
